DETAILED ACTION

Allowable Subject Matter

1. Claims 43-54 are allowed. The following is an examiner's statement of reasons for allowance:

Conventional digital communication systems transmit signals between a base station and handset receivers. In order to increase overall capacity, the area covered by a single base station, typically known as a cell, will have reduced size or different cells will overlap. However, in such systems recovery of communication is difficult since communications from many different terminal devices must be simultaneously detected from a single received signal at a base station. To help assist with this issue, such conventional digital communication systems use power control in order to reduce interference for terminal devices that are at different distances within a particular cell. While the method of power control has allowed digital communications to evolve, the drawback is that data rate for each terminal device is maintained at some nominal rate.

It is the object of the present invention to provide a communication system that allows for an increase in capacity when receivers are operating closer to transmitters, and thereby using less power. To obtain this objective, rather than having any terminal device limited to a specific maximum data rate, the terminal device data rate is limited by the power being used, such that the data rate can vary according to the distance that terminal device is from the intended receiver. A substantial search of the field of invention failed to provide any prior art of record that discloses, teaches, and/or fairly suggests "determining a second data rate based upon the received power level of the

first communication data received by the second transceiver from the first transceiver, wherein said second data rate is set according to a maximum data rate maintained in inversely proportional relation to the distance directly between said first and second transceivers" as specifically described in the independent claims of the instant application. Therefore, the claimed invention is patentable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

a) Chen (US 2008/0261537) discloses a method in a wireless communication system that selects a highest possible data rate transmission at each received power level such that in considering the propagation distance between a transmitter and a receiver to have one to one corresponding received power, a rate distance feature of the wireless communication system can be created.
